[हिन्दी] Generativ...

Untitled notebook

1 source

Generative AI produces content using pre-trained data. **AI Agents** use tools and APIs to complete specific, narrow tasks autonomously. **Agentic AI** systems employ multiple agents for complex, multi-step reasoning and planning, functioning like human workflows to achieve evolving goals.

How do Generative AI, AI Agents, and Agentic AI differ?

Explain how AI agents use tools and reasoning for tasks.

What are some real-world examples of multi-agent
