

Workshop Proposal: Empowering Administrative Excellence through AI

Subject: Proposal for "AI for Administrative Excellence" Workshop

As educational environments evolve, Artificial Intelligence is no longer just a tool for researchers—it is a powerful ally for the administrative backbone of an institution. This workshop is designed to demystify AI for non-teaching and administrative staff, transforming "tech anxiety" into practical, time-saving skills.

Workshop Objectives

The goal is to move participants from basic awareness to active implementation. By the end of this session, staff will be able to automate repetitive tasks, draft complex communications in seconds, and manage schedules with AI-driven efficiency.

Module	Core Focus
1. Basics of AI	Demystifying AI: What it is (and what it isn't). A layman's guide to how machines "learn" without the jargon.
2. AI in Daily Life	Highlighting AI already in use (Netflix, Maps, Spam filters) to build comfort and familiarity.
3. Intro to LLMs	Understanding Large Language Models like Gemini and ChatGPT. How they process information and why they sometimes "hallucinate."
4. Prompting Know-how	The art of the "Perfect Prompt." Moving beyond simple searches to structured commands (Context, Task, Constraints).
5. Your AI Toolkit	A curated list of free and enterprise tools for document summarizing, image generation, and data organization.
6. The AI Assistant	Practical applications: Drafting emails, meeting minutes, scheduling, and organizing departmental workflows.
7. AI Pedagogy & Ethics	Looking ahead: Data privacy, bias awareness, and supporting the institution's broader AI integration.

Workshop Duration & Mode – 4 hours, In-person
